Jeppesen's Guided Flight Discovery Instrument/Commercial tutorial provides the most complete explanation of aviation concepts for pilots pursuing a rating instrument or a commercial certificate. This colorful tutorial is the main source for initial study and review. It includes the principles of the flight instrument, flight environment, tool charts and procedures, aviation weather and IFR flight operations and commercial pilot operations, as well as an introductory look at the construction of professional experience. The most complete and visually appealing tool/commercial tutorial ever! The Tool/Commercial textbook is the primary source for initial study and review to obtain an evaluation of a tool or a commercial pilot's certificate. Intuitive organization and colorful presentation of the guide will help you learn quickly from the beginning. The text contains a complete and concise explanation of the cutting-edge concepts and ideas that each document and commercial pilot project must know with subjects organized logically to draw on previously presented themes. You can expand your knowledge on specific subjects and the world of aviation by exploring Discovery Insets, which are strategically located in all chapters. To help you understand how your mind and body function during flight, the principles of human factors are presented in the human elements of insets. Throughout the manual, concepts directly related to FAA test issues are described in FAA instructions. To help you effectively consider the material, the key terms are highlighted throughout the text and are listed at the end of each section along with a checklist that summarizes important concepts. You can also evaluate your understanding of the material by filling out related questions at the end of each section. New functions!
