ThoughtCo uses cookies to give you a great user experience. Using ThoughtCo, you accept our use of cookies. Your first task in writing a how-to essay is to decide on the topic. If you are like many students, you may feel as if you don't know anything good enough to teach others. But that's not true! All people have something they can do so well that they don't even think about how to do more- they just do it. When you read the list below you will realize that you know a lot of things in depth, good enough to teach. Normally, your inspiration will be based on lateral thinking. For example, from the list below, you can write an essay on how to cook a Scottish egg after you see Crack Egg on the list. Or you can write about how to make an Excel spreadsheet with all the homework listed after viewing Organize Homework on the list. Narrow down the selection to a few topics and then brainstorm for a few minutes on each topic. Determine which one has the greatest potential, because it can be divided into five to 10 clear paragraphs that you can explain well. Some topics are easier than others to explain. Direct processes compared to those with more contingencies will be much less difficult to prescribe, for example. If you find that you've chosen a topic that's too wide, select one part to explain. Remember that you want your reader to be able to follow the instructions to successfully complete the process. In your compilation, err on the side of too many details and descriptions, not too little. (It's easier to cut out stuff you don't need than to add to it later.) If you can't use images with instructions, choosing a theme that helps visuals makes writing the learning process much more difficult, so take your destination options into consideration as you choose what to write. If you know your theme so well that it comes naturally for you, it can be difficult to write instructions for a beginner who doesn't know the topic because you forgot how much you didn't know when you first started. Have your partner try your instructions during the design or revision phase (or both) to see what you left behind or what is not explained clearly enough. How do you think about possible topics for your appointment argument, consider the issues discussed by columnists in your local newspaper or your classmates at the diner. Then prepare to explore one of these issues by studying both sides of the argument before setting out your own position. Perhaps the best way to get started on a controversial essay, whether you're working on your own or with others, is to list a few possible topics for this project. Venture down so many current issues that you may think, even if you haven't yet formed strong opinions about them. Just make sure they are issues - issues open to discussion and discussion. For example, cheating on exams is hardly a problem: few would dispute that cheating is wrong. More controversial, however, would be the suggestion that students caught cheating should be automatically dismissed from school. As you list possible topics, keep in mind that your ultimate goal is not just to express your on the subject, but also to support your views with reliable information. For The For The reason you can stay away from those that are very charged with emotion or just too hard to be addressed in a short essay - topics such as the death penalty, for example, or the war in Afghanistan. Of course, that doesn't mean you should limit yourself to trivial questions or those you care nothing about. For example, a well-supported argument about the need for a childcare center on campus would probably be more effective than a set of unsupported views on the need for free, universal childcare services in the United States. Finally, if you still find yourself at a loss for what to argue about, check out this list of 40 Writing Topics: Arguments and Beliefs. Once you've listed a few possible topics, select the one that appeals to you and freewrite on the subject for ten or fifteen minutes. Put down some background information, your own views on the subject, and any opinions you've heard from others. You can then join several other students in a brainstorming session: invite ideas on both sides of each question and list them in separate columns. As an example, the table below contains notes taken during a brainstorming session suggesting that students should not take physical education courses. As you can see, some points are repetitive, and some may seem more compelling than others. As with any good brainstorming, ideas have been suggested rather than judged (which comes later). First by studying your topic in this way, given both sides of the issue, you should find it easier to focus and plan your arguments in the later stages of the writing process. Suggestion: Physical education courses should not be mandatory PRO (Offer Support) CON (Against The Proposal) PE classes unfairly reduce the GPAs of some good physical training students is an important part of education: Common mind in body sound. Students should play sports in their own time, not on credit. Students need to take a break from lectures, textbooks and exams from time to time. School to study, not to play. A few hours of physical education classes never hurt anyone. One gym can't turn a poor athlete into a good one. What good improves your mind if your body is going to pieces? Do taxpayers understand that they pay for students to bowl and play badminton? Pe courses teach some valuable social skills. PHYSICAL courses can be dangerous. Most students like to take physical education courses. The focus of the arguments begins with a clear position on the subject. See if you can express your point of view in one sentence sentence, such as the following: Students should (or do not) citizens must be required to pay for campus parking permit.U.U.S. citizens should (or should not) be allowed to vote online in all local, state and national elections. Cell phones should (or shouldn't) should) banned in all classes. Of course, as you collect more information and develop your argument, you are quite likely to reformulate your sentence or even change your position on the subject. At this point, however, this simple statement proposal will assist you in planning your approach. Scheduling an argument means deciding on three or four points that best support your proposal. You can find these points in lists that you've already compiled, or you can combine certain scores from these lists to form new ones. Compare the following scores with those given earlier on the issue of necessary physical education courses: Proposal: Students should not take physical education courses. Although physical training is important for everyone, it can be achieved better through extracurricular activities than in the necessary physical education courses. Evaluations on physical education courses can have a detrimental effect on GPAs of students who are academically strong but physically challenged. For students who are not prone to sports, physical education courses can be humiliating and even dangerous. Notice how the writer drew on both of his initial lists, for and against, to develop this three-point plan. Similarly, you can support the proposal by speaking out against the opposite viewpoint while also arguing for your own. When compiling a list of key arguments, start thinking ahead to the next step in which you have to support each of these observations with specific facts and examples. In other words, you have to be willing to prove your point. If you are not prepared to do so, you should explore your topic further, perhaps in a subsequent brainstorming session, before exploring your topic online or in the library. Remember that a strong feeling about the problem does not automatically allow you to argue about it effectively. You should be able to back up time your points clearly and convincingly with accurate, accurate information. Either independently or brainstorming with others, explore at least five of the following questions. Squeeze as many points of support as possible, both in favor of the proposal and in opposition to it. Final grades should be excluded from all courses and replaced with skip or failure classes. A year of national service with a minimum wage should be required for all 18-year-olds in the United States. People should be allowed the freedom to share music files online without having to pay for a subscription. To encourage people to maintain healthy eating habits, foods high in fat and of little nutritional value should carry a special garbage tax. Parents should prevent their young children from watching TV Weekdays. Students should have full freedom to choose their own courses. Courses. Courses.
